InFocus

Bright Ideas Made Brilliant

InFocus IN8601 3D Home Theatre Projector:
Your gateway to a new dimension

1080p (3D in 720p) ○ 2D-to-3D Conversion ○ 2500 Lumens
30,000:1 Contrast Ratio ○ XPAND 3D Glasses Included

IN8601

Take your home theatre experience to another dimension

The InFocus IN8601 is your point of entry to a whole new dimension in home theatre—a 3D world that transforms seeing into believing. Whether you're screening a film with your family, watching a match with your friends or playing a game against a formidable foe, the IN8601 makes 3D real.

What makes the IN8601 so authentic?

- 3D projection (at 720p) that immerses you in the action
- Convert any 2D content to 3D for a whole new viewing experience
- Full 1080p (1920 × 1080) HD for diamond-sharp images (2D only)
- 2500 lumens and 30,000:1 contrast for outstanding images even in ambient light
- Pixelworks DNX™ 10-bit video processing that makes you wish real life ran so smoothly
- High quality XPAND 3D glasses are included

Enter a new dimension in entertainment with the IN8601 3D Home Theatre Projector

The days of seeing a film, watching a match, playing a game are over. Long live the new days—as the InFocus IN8601 delivers the most extraordinary experience you've ever had in your entertainment room. A full 1080p HD display on a 305 cm screen makes entertainment lifelike and lifesize.

With the IN8601, 3D is built-in, ensuring continuous, colourful, crystalline images (in 720p) that delight the eyes and the mind. Take advantage of all today's 3D offerings—from Blu-ray™ discs to high-end games to Sky 3D broadcasts—and put on a show for your family and friends. All you'll need to add is popcorn and your favourite beverage.

Convert 2D to 3D

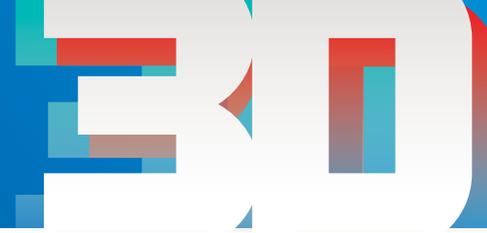

Experience your entire video collection from a whole new perspective. The IN8601's built-in 2D-to-3D conversion can transform any 2D material into 3D sequential format, immersing you in the scene like never before.

2D-to-3D image conversion

Lifesize Projection

Why make the leap from a TV to a projector? You may as well ask why you should make the leap from watching life to living it. Once you're thrilled by the big screen, you'll know something's missing with your flat-screen. The IN8601's 305 cm projection engages your vision and all your complementary senses to blur the line between reality and imagination.

3D That Shines

To make sure those nerdy-but-cool glasses we've included don't dim your view, the IN8601 blazes away with 2500 lumens—so 3D looks as bright and sharp as 2D. And 30,000:1 contrast highlights black, white and every shade of grey in the spectrum for crisp detail.

Frames Defined

Directors shoot their films at 24 frames per second, and that's how you should watch them. The IN8601 ensures every frame comes through proud and clear in 1080p HD. Even films which weren't shot in HD can act like they were. The IN8601 recaptures all 24 original frames from every movie in your library and makes them look just like the director always wanted them to.

Contemporary Looks

A projector that produces brilliant 3D images has to look the part—after all, it will take up prime space in your home. Fortunately we've been making projectors long enough to know how to put them together in the most efficient and aesthetic arrangement. The IN8601 features a compact, stylish chassis cloaked in understated basic black. You also get the flexibility to set the IN8601 on your table or shelf or mount it to the ceiling. Wherever you put it, it will blend beautifully with your décor.

Stunning Image Enhancements

To be lifelike, 3D also requires meticulous attention to the details that InFocus has perfected over decades of building award-winning digital projectors. The IN8601 includes the capability to adjust the saturated, vibrant colours and seamless gradation to suit your room lighting and your individual taste.

And even though it's our entry-level 3D model, the IN8601 ensures ultra-smooth playback thanks to Pixelworks DNX™ 10-bit video for processing, de-interlacing and advanced scaling. Plus, it uses the latest DLP® chipset by Texas Instruments™ to produce deep blacks, pure whites, subtle grey-scale definition, and 1.07 billion colour variations.

An Unmatched Value

As our launching point into the 3D world, the IN8601 comes at a price that's easily affordable. So you can experience 3D without putting the hurt on your wallet—and still own a projector that gives you 1080p HD or 3D in 720p, with the depth, brightness, contrast and clarity that you crave.

Glasses You Want to Wear

The IN8601 comes with a pair of 3D glasses by XPAND, the biggest name in 3D glasses. Optimised for DLP projectors, they feature the fastest shutter technology for the brightest image. They're also rugged and flexible for extra-long life and supreme comfort.
